

Detect Fraud

Analyze individual transactions using our Machine Learning powered Random Forest fraud detection system. Get instant fraud probability and risk assessment.

Random Forest

Fraud Detection

Instant Analysis

Risk Assessment

Transaction Analysis

Enter transaction details to start the analysis

Transaction ID

34

Enter the ID of the transaction you want to analyze.

Amount (Optional)

1.77

If available, enter the transaction amount for additional context.

Analyze Transaction

How Fraud Detection Works

1. Transaction Input

Enter the transaction ID and optional amount.

2. Feature Processing

Transaction data is prepared for the machine learning model.

3. Random Forest Analysis

The trained Random Forest classifier analyzes the transaction.

4. Fraud Risk Result

The system returns the prediction, probability and risk level.

Random Forest Model

Fraud Intelligent uses a Random Forest machine learning classifier to identify suspicious transaction patterns and classify transactions as Normal or Fraudulent.

Normal Transaction

Transaction Appears Normal

This transaction has been classified as normal by the model.

TRANSACTION ID

34

AMOUNT

₹1.77

PREDICTION

Normal

RISK LEVEL

LOW

Fraud Probability

0.0%

Why Use Fraud Intelligent?

Powerful machine learning tools for transaction risk analysis.

Fraud Probability

Receive a probability score that indicates how suspicious a transaction is.

Risk Level

Understand transaction risk through an easy-to-read classification.

Machine Learning

Powered by a trained Random Forest classification model for fraud analysis.
