

Fraud Intelligent

A machine learning based fraud detection system that analyzes financial transactions and identifies potentially fraudulent activity using a powerful Random Forest classification model.

Powerful Fraud Detection

Everything you need to analyze transactions and identify potential fraud.

Fraud Detection

Identify potentially fraudulent transactions using machine learning classification.

Smart Analytics

Understand transaction patterns, fraud rates, amounts and model performance.

Fast Analysis

Quickly analyze individual transactions or process large transaction datasets.

Why Use Fraud Intelligent?

Designed to make fraud analysis simple, fast and understandable.

Fraud Probability

View the probability that a transaction may be fraudulent.

Risk Level

Transactions are categorized into understandable risk levels.

CSV & Excel Support

Upload CSV, XLSX or XLS files for batch analysis.

Transaction Search

Search for a transaction using its transaction ID.

Visual Analytics

Explore fraud distribution and transaction patterns using charts.

Model Evaluation

Review accuracy, precision, recall, F1 score and confusion matrix.

How Fraud Detection Works

Analyze a transaction in four simple steps.

1

Enter Data

Enter a transaction ID or upload a transaction dataset.

2

Process Features

Transaction features are prepared for the machine learning model.

3

4

Model Analysis

The Random Forest classifier analyzes the transaction.

Get Result

Receive prediction, fraud probability and risk level.

Machine Learning Workflow

From transaction data to fraud prediction.

Input Data

Transaction dataset

Preprocessing

Prepare features

Random Forest

Model prediction

Classification

Fraud or Normal

Result

Risk and probability

Ready to Detect Fraud?

Analyze financial transactions with machine learning and identify potentially fraudulent activity using the Fraud Intelligent system.
