Batch Fraud Detection

 **Upload Dataset**
Select your CSV or Excel transaction dataset.

 **Process Data**
The system prepares the transaction features for machine learning analysis.

 **Random Forest Prediction**
Each transaction is classified as Normal or potentially Fraudulent.

 **View Results**
Get total transactions, fraud count, fraud rate and transaction amounts.

Supported Files

CSV, XLSX and XLS files are supported for batch fraud detection.

Analysis Results

Fraud detection results generated from your uploaded file.

Fraud Amount

₹56177.9

Normal Amount

₹25106412.11

Powerful Batch Analysis

Analyze large transaction datasets quickly and efficiently.

Fast Processing

Analyze thousands of transactions in a single upload instead of checking them one by one.

Fraud Identification

Identify transactions that the Random Forest model classifies as potentially fraudulent.

Detailed Statistics

View transaction totals, fraud rate, normal transactions and transaction amounts.
